
Turn bid packages into reviewed, priced proposals.

A governed workflow for extracting requirements, matching products, and preserving human judgment.

-
- One governed platform from intake to customer-ready output.

Same team, fewer manual stages

The first four stages become automatic. Your team keeps the two that need judgment.

TODAY · MANUAL The day goes to sorting, reading and retyping

One document, two questions

 **Lakebase** — rows and decisions, durable across stages

Provenance — every row traces to its file and page

 **Unity Catalog** Both paths run inside one permission, lineage and audit boundary.

Bids AI, end to end on Databricks

Every AI step is a built-in platform capability running on governed data.

HUMAN OVERSIGHT Every override is stored as a decision, not an overwrite.

 Generative AI functions  Retrieval & ranking

live state — bids and decisions

Unity Catalog + Unity AI Gateway · Data and AI Governance

Built for better decisions—not automatic guesses.

TRACEABLE

Every extracted row stays tied to its source file and page.

REVIEWABLE

Weak matches wait for review; NO MATCH is explicit.

GOVERNED

Reviewer decisions are retained for audit.
